

Abayjit Sidhu

Game Developer

Portfolio: abay402.github.io

+1-365-998-5496 · abayssidhu@outlook.com · linkedin.com/in/abayjit-sidhu-467640208

Skills

Programming: C++ · C# · Python · JavaScript · Java · AI Programming · OpenGL · Vulkan · Unreal Engine · Unity

Development Tools: GitHub · Agile Development · Version Control · Trello · Blender · 3ds Max

Other Skills: Software Design · Problem Solving · Team Collaboration · Project Management · Communication

Education

Humber College 2024

Advanced Diploma | Game Programming - *Toronto, Ontario*
• Dean's Honour List for the Faculty of Media and Creative Arts

Peel Alternative School North 2021

High School Diploma | General Studies - *Brampton, Ontario*

Projects

Top Down Zombie Game 2023

SDL Framework, C++

- Enhanced player progression and replayability by designing an item upgrade and drop system with seamless state management.
- Elevated enemy challenge and immersion by implementing pathfinding AI that navigated dynamic obstacles.

Sky City Fugitive 2024

Unreal Engine, C++

- Improved gameplay continuity by building a checkpoint-based respawn system with persistent world state.
- Expanded narrative depth through a branching dialogue system powered by XML parsing for dynamic NPC interactions.
- Accelerated feature integration by creating a scalable, event-driven communication system for modular actor interaction.

Baby Zombie Factory 2023

Unreal Engine, C++

- Delivered project stability in the final 3 weeks by refactoring core systems across a 15-member team.
- Strengthened performance and long-term scalability by optimizing and refactoring critical code under strict deadlines.

Experience

Game Programmer (Contract) Feb 2025 – June 2025

Nuno4 Studio – *Remote*

- Accelerated load times by 70% by designing and implementing a JSON-based serialization system in C++/Unreal that dynamically saved and restored Actors and Components.
- Delivered a fully functional startup UI system, including flow management and animated transitions, improving onboarding and usability.
- Strengthened cross-team collaboration by contributing in an agile environment with Git version control and clear communication practices.
- Enhanced gameplay systems and optimized performance, ensuring scalable and maintainable architecture for future feature expansion.

Software Engineer Dec 2024 – July 2025

Outlier – *Remote*

- Improved LLM accuracy and reliability by designing high-quality prompts and performing detailed evaluations of model outputs.
- Applied software engineering expertise to assess code correctness, optimize prompts for technical tasks, and ensure models followed expected logic and standards.
- Identified patterns in model errors and documented feedback to improve training pipelines.
